The Finance team: the money people

You are a piggy bank with $500,000 in it. Your job is to make the piggy bank bigger by the morning.

The big idea

Imagine 50 lemonade stands. Each stand is cut into 100,000 tiny pieces, like a pizza cut into 100,000 slices. Each slice is called a **share**. You can buy slices. If the stand becomes popular, each slice is worth more. If the stand has a bad day, each slice is worth less.

Buy slices that will get more valuable. Sell slices that will get less valuable.

Your friends (your squad)

At 21:00 the computer puts you in a team of three, called a **squad**:

- 🍋 one **Product** team (they run a lemonade stand),
- 🧑‍💼 one **Consulting** team (they give advice),
- 💰 you.

You **must** buy 5,000 slices of your friend's stand at $10 each, right at the start. That gives them money to start, and you keep those slices until the end. But **you can never buy or sell your friend's slices in the market**. That would be cheating, because you know their secrets.

How the night goes

1. **Read the stories (22:30).** Every stand writes a story about itself. Read them all. You can ask any stand a question on the Q&A board.
2. **The first sale (23:15).** Ask for slices of the stands you like: up to 4,000 slices of each. If too many people want the same stand, everyone gets a bit less.
3. **Buying and selling (from 23:30).** Every 15 minutes there is a **round**. You put in your orders: BUY or SELL. When the round ends, the price moves:
   - lots of people buying → the price goes **up** 📈
   - lots of people selling → the price goes **down** 📉
   - **everyone gets the same new price**, so if everyone buys the same stand, everyone pays more!
4. **Oh no! (00:30).** Something bad happens to every stand. All prices drop by 15%.
5. **Helping your friend (by 02:45).** Your friend's stand needs money. You give them $40,000 to $80,000 and get cheap slices back. All three of you must press **Sign**. If anyone changes anything, everyone signs again.
6. **Surprise news (04:00).** Something happens in the world. Prices move again.
7. **The end (05:00).** Everything stops. We count your money.

Two magic rules

- **The robot teacher counts too.** Every stand gets marks from a robot teacher (the AI judge). The final price is **half** what the players think and **half** what the teacher thinks. A stand with bad marks can't stay expensive, however much people buy it.
- **Betting down (shorting).** If you think a stand will go down, you can "short" it: sell slices you borrowed. If the price goes down, you win. If it goes up, you lose. You must keep extra money locked to do this.

Limits (so nobody breaks the game)

- At most **4,000** slices of any one stand.
- At most **2,000** borrowed (shorted) slices of any one stand.
- You need enough money in your piggy bank for every order.

How you win

At 05:00: **your money + your slices × the final price**. The team whose piggy bank grew the most wins. 🏆
There's also a prize for the fund that would have done best using only the robot teacher's prices.

Don't

- Don't copy another fund's orders. The computer notices.
- Don't share your password.
