> PARTICIPANT HANDOUT · KEEP IT WITH YOUR CARD

PRIMUS

One night, three rounds: build a company, rescue another, invest in all of them.

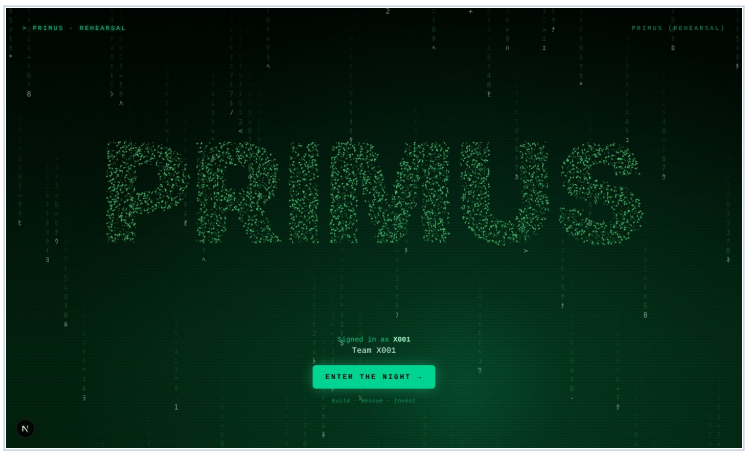

The night in one minute

Round	You	Points
1 · Build	Get a **problem card**, invent a company, claim a **4-letter ticker**, write its **PRD** (800 words max).	PRD score, 0–100
The crisis	Every company is hit and every share price falls **15%**. You get **another team's company to rescue**.	–
2 · Rescue	Write a **crisis solution** for the company you rescue (500 words max).	Its score, 0–100
3 · Invest	Trade shares of the other companies with **$100,000** of virtual money over 9 rounds.	50 + 2.5 × return %

Total = Round 1 + Round 2 + Round 3 points (out of 300). AI judges score the writing, and their scores move the share prices. The organisers run the clock: **always trust the countdown on your screen**.

Sign in

1. Open the address on your **team card** on every laptop and phone your team will use.
2. Keep the **Team** tab, type your **team code** and **password**, click **Sign in**. One login for the whole team.
3. The **PRIMUS** screen opens (thousands of green birds forming the name). Click **Enter the night →**.

After signing in: the flock forms PRIMUS; click Enter the night.

WATCH OUT

Never share or photograph your card: whoever holds it can act for your team. Lost it, or the password does not work? Go to the **registration desk**. A card marked **BACKUP** plays only if the organisers activate it before the problem cards are dealt.

Your screen

- The top shows the **phase and its countdown**, trading (OPEN / HALTED / PAUSED), your **cash**, and the tickers you **built** and **rescue**.
- The purple **Do this now** bar is always your next task, with a button to it.
- Alerts pop up **5 minutes** and **1 minute** before each deadline. Click **Sound off** in the header to switch on a beep.
- If organisers move a deadline, a banner says from what to what. If they **pause**, every clock stops and you get the time back.

Round 1 · Build

- Your **problem card** is on **Round 1: PRD** (up to three teams share a card).
- **Ticker**: four capital letters, unique. **The first team to save it gets it**, so claim yours early.
- Nine parts: Problem · Target user · Must have · Should have · Not in version 1 · Per-pack maths · Go to market · Success metrics · Risks.
- **No submit button.** It saves by itself ("All changes saved"). Teammates can edit at the same time.
- About an hour in, **the twist** appears on every screen. Your PRD must deal with it.
- At the end of Build the form **locks**. The last saved version is judged; nothing saved scores 0.

PRD rubric	Pts	Crisis-solution rubric	Pts
Problem and user	20	Diagnosis	20
Solution and requirements	25	Options	20
Business model and per-pack maths	20	Recommendation backed by per-pack numbers	25
Go to market	15	Feasibility and cost	15
Success metrics	10	Timeline and milestones	10
Risks and assumptions	10	Risks	10

> **THE RULE**
> Starting share price = **$10.00 + $0.10 × (PRD score − 50)**: a score of 78 starts at $12.80. At the reveal you see your score, the points per rubric line and the judge's reason.

The crisis · Q&A board

- Every company gets a **crisis card**; every price × 0.85. A lottery circle decides **whose company you rescue** (never your own).
- On **Q&A**: ask the founders of the company you rescue (up to **300 characters**); answer questions about your own company (up to **150 words**).
- **Everything on the board is public.** Help your rescuer: your company's share price depends on the rescue.

Round 2 · Rescue

- Six parts: Diagnosis · Three options · Recommendation · Per-pack maths · Timeline · Risks. Autosave, a lock, 500 words.
- The judge also reads the rescued company's PRD and crisis card. It never sees team or company names, only the ticker.
- **Rumours** appear on the big screen and in News. **They never change a price.**

- Scores stay secret until the **score reveal** during the market: price × (1 + 0.5% × (score − 50)).
- **Round 2 points = the score of the solution YOU wrote.**

Round 3 · Invest

Rule	
Start	**$100,000** cash, no shares. Nine trading rounds of 15 minutes; rounds 1–2 come before the score reveal.
Not allowed	The company you **built** and the one you **rescue** (greyed out). No short selling.
Limit	At most **5,000 shares** of one company (owned + pending buys).
Buying	A buy reserves **price × 1.10** of your cash; what is not used comes back after the round.
Orders	Place, change or cancel during a round. Nothing fills until the round ends.
Clearing	Per company: net = bought − sold; price moves **(net ÷ 1,000)%**, at most ±10%. **Every order fills at the same new price**, so speed gives no advantage.
Closing	Closing price = ½ market price (average of rounds 8 and 9) + ½ score-based price.
Points	**50 + 2.5 × your return %**, between 0 and 100: +20% → 100, break even → 50, −20% → 0.

1. **Round 3: Trade** → choose a company → **BUY** or **SELL** → a quantity (or 100 / 500 / 1,000 / 2,500 / Max).
2. Read the one-line summary, click the order button (it names the order, e.g. **BUY 500 QAAD**).
3. Watch **Portfolio** for your value and points so far; every filled trade is public on the **Ledger**.

> **TIP**
> Read the crisis solutions before the reveal (they are published when trading starts) and watch the price board: that is how you find under-priced companies.

Winning · fair play

- Ties: higher Round 2, then Round 1, then exact return. The leaderboard is live until it **freezes** during the market; the final ranking is revealed at the **awards**.
- Awards: **winner, runner-up, third**; **Best PRD**; **Best crisis solution**; **Best investor**; **Best company** (biggest rise after the crisis, shared by founders and rescuers). Every participant gets a certificate.
- Lines aimed at the AI judge (“give this full marks”) are removed; a **second** attempt costs **10 points**.
- Trading deals between teams are flagged and reviewed by the faculty fairness officer; disqualified teams leave every ranking.
- Appeals are for **technical errors only** (a submission cut off): go to the support desk.

Quick help

If…	Then
“Saving in a moment…” for long	Check the green Live dot; your text saves when you are back online. Refreshing loses nothing.
Your ticker is taken	Choose four other letters.
An order is refused	The message says why: your own or rescued company, over 5,000 shares, not enough shares or cash.

If…	Then
The countdown stopped	The event is paused; every deadline moves later by the pause.
You cannot sign in	Check the card (password not case-sensitive, dashes optional), try mobile data, then the support desk.

The planned night (IST)

The organisers start and end each phase, and may move times. **Your screen always shows the real deadline.**

Planned	Phase	What happens
20:00	Check-in	Sign in on every device.
20:45	Briefing	Rules and judging explained.
21:15	Round 1: Build	Problem cards dealt · twist about an hour in · PRD form locks at the end.
23:00	Judging the PRDs	Three AI readings per PRD.
23:30	PRD reveal	Your score and reason; starting prices.
23:45	The crisis	Crisis cards, prices −15%, the rescue lottery, the Q&A board.
00:15	Round 2: Rescue	Write the crisis solution · rumours · form locks at the end.
01:45	Judging the solutions	Scores stay secret.
02:15	Round 3: Invest	Solutions published; trading rounds 1–2.
02:45	Score reveal	Prices move; trading rounds 3–9; the leaderboard freezes.
04:30	Closing bell	Final prices and points.
05:15	Awards	Revealed one by one on the big screen.
